

Straight Accessory - Art. 50V003

The straight accessory (art.50V003), named also linear extension, is a mechanical accessory that applies sturdily to the instrument and allows to take measurements (as predicted by the EN12453) at specific distances: 30cm and 50cm.

The straight accessory is useful for all kind of closures: horizontals, verticals and shutters.

The straight extension can be applied to the BlueForce, BlueForce Smart, Speedforce and customised force testers.
